Professional Summary

Analytical Computer Science senior with a strong record of delivering full-stack, AI-driven products from data collection through deployment. Proven ability to translate large, unstructured datasets into actionable insights, build interactive dashboards, and communicate findings to diverse stakeholders (engineers, designers, product owners, faculty judges). Skilled in Agile team leadership, cross-functional collaboration, and modern data-visualisation tools. Seeking a Business-Analytics role where technical expertise can drive customer-journey mapping, lead-conversion analysis, and digital-sales performance tracking.

Skills

Data Analysis & Visualization – Pandas, NumPy, data cleaning, statistical analysis, exploratory data analysis, Tableau (familiar), Power BI (familiar), Google Analytics (basic), Excel (advanced formulas & pivot tables), Google Sheets, PowerPoint/Google Slides for dashboards and stakeholder decks.

Business Tools & Collaboration – Agile (Scrum), JIRA/Trello, Figma (UX design hand-off), Microsoft Office, Google Workspace, cross-functional liaison (IT, Marketing, Sales), stakeholder presentation, demo deck creation.

Programming & ML/AI – Python, Java, JavaScript/TypeScript, SQL, Flask, FastAPI, Next.js, React, Node.js, PyTorch, TensorFlow, Keras, HuggingFace, Scikit-Learn, OpenCV.

Databases & Data Pipelines – MySQL, PostgreSQL, MongoDB, Pinecone (vector DB), SQL/NoSQL modeling, ETL pipelines, data ingestion & transformation.

Cloud & DevOps – AWS EC2, Docker, Apache2, Gunicorn, Linux (Ubuntu), Git/GitHub, GitHub Actions, CI/CD.

Experience

Team Lead / Database Engineer – GaitorGate (AI-Powered Search Engine)

Flask, MySQL, AWS EC2, Google Gemini, Figma, Git – Jan 2024 – May 2024

- Directed a 6-member Agile team; coordinated with UI/UX designers (Figma) and product owner to prioritize features, resulting in the highest-rated submission among 12 groups.
- **Collected & cleaned** >10,000 AI-tool metadata records (JSON/CSV) using Python scripts; stored in MySQL and built automated data-validation pipelines.
- Conducted exploratory analysis in **Excel** and **Google Sheets**, generating summary tables that guided keyword-search algorithm tuning.
- Crafted a stakeholder demo deck in **Google Slides**, presenting architecture, data flow, and performance metrics to faculty judges and potential users.
- Developed and maintained secure authentication, NLP-enhanced search, and a rating/review system; deployed via Apache 2 + Gunicorn on AWS EC2.

Developer – MovieCenter (RAG-Based Movie Recommender)

LangChain, Pinecone, MongoDB, Next.js, Docker, AWS EC2, Pandas – Sep 2023 – Dec 2023

- Engineered a Retrieval-Augmented Generation pipeline that ingested **≈10,000** movie records from TMDB API, performed **data cleaning & normalization** with Pandas, and indexed embeddings in Pinecone.
- Ran statistical analysis (precision@k, recall) in **Jupyter Notebook**; achieved a **30% lift** in semantic similarity search accuracy over baseline.
- Produced a **PowerPoint** dashboard summarizing recommendation performance, visualizing hit-rate trends for product stakeholders.
- Automated daily data refresh jobs; documented ETL steps in **Google Docs** for cross-team knowledge sharing.
- Deployed containerized FastAPI backend on Docker/AWS EC2; integrated with a responsive Next.js/React UI.

Developer – Board2Board (Chess-Board Recognition AI)

Keras, OpenCV, TensorFlow, Jupyter, Git – Feb 2023 – May 2023

- Designed a computer-vision pipeline that **collected & labeled** >2,000 chess-piece images; applied image-preprocessing and data augmentation to improve model robustness.

- Conducted **exploratory data analysis** in **Excel** to identify class imbalance and guided oversampling strategy.
- Trained a fine-tuned ResNet50 model, attaining **94 % accuracy** across 13 classes; documented results in a visual report using **PowerPoint** for the research symposium.
- Implemented a linear-regression-based adaptive thresholding module, enhancing detection under variable lighting conditions.

Projects (Selected)

Project	Role	Key Data-Focused Contributions
GaitorGate	Team Lead / DB Engineer	• Gathered >10k tool records; cleaned and validated schema in MySQL. • Produced Excel pivot-tables & Google Slides demo deck for judges. • Coordinated with designers (Figma) and product owner to align search features with user needs.
MovieCenter	Developer	• Extracted & normalized 10k movies via TMDB API; performed statistical analysis with Pandas. • Built PowerPoint performance dashboard for stakeholder review. • Documented pipeline steps in Google Docs for cross-functional visibility.
Board2Board	Developer	• Collected 2k+ labeled chess images; used Excel for class-distribution analysis. • Delivered results in a concise PowerPoint presentation for academic symposium.

Education

San Francisco State University – San Francisco, CA
Bachelor of Science, Computer Science (Minor: Mathematics) – Expected Dec 2026

Relevant Coursework: Data Structures, Database Systems, Machine Learning, Business Analytics Fundamentals, Human-Computer Interaction.

Technical Tools

- **Languages:** Python, Java, JavaScript/TypeScript, SQL
 - **Web/Cloud:** Flask, FastAPI, Next.js, React, Node.js, AWS EC2, Docker, Apache 2, Gunicorn
 - **Data/ML:** Pandas, NumPy, Scikit-Learn, TensorFlow/Keras, PyTorch, HuggingFace, OpenCV, LangChain, Pinecone
 - **DB:** MySQL, PostgreSQL, MongoDB, Pinecone (vector)
 - **Visualization/Reporting:** Excel, Google Sheets, PowerPoint, Google Slides, Tableau (familiar), Power BI (familiar)
 - **Collaboration:** Git/GitHub, GitHub Actions, JIRA, Trello, Figma, Google Workspace, Microsoft Office
-

Ready to leverage data-driven insights, visualization expertise, and cross-functional collaboration to optimize customer journeys and digital sales performance.
